INCRINO: TGF-BETA IS A WULTIEVUKTIONAL PEPTIDE THAT CONTROL
PROLIFERATION, DIFFERENTIATION, AND OTHER FUNCTIONS IN MANY CELL
TYPES. MANY CELLS SYNTHESIZE TGF-BETA AND ESSENTIALLY ALL OF THEM
HAVE SPECIFIC RECEPTORS FOR THIS PEPTIDE. TGF-BETA REGULATES THE
ACTIONS OF MANY OTHER PEPTIDE GROWTH FACTORS AND DETERMINES
A POSITIVE OR NEGATIVE DIRECTION OF THEIR EFFECTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    279 ALDINYCESSTEKNCCVRQLYIDFRKDLGWKWIHEPKGYHANFCLGPCPYIWSLDTQYSK 338

FUNCTION: MULTIFUNCTIONAL PEPTIDE THAT CONTROL PROLIFERATION, DIFFERRYIATION, AND OTHER FUNCTIONS IN MANY CELL TYPES. MANY CELLS SYNTHESIZE TGF-BETA AND ESSENTIALLY ALL OF THEM HAVE SPECIFIC RECEPTORS FOR THIS PEPTIDE. TGF-BETA REGULATES THE ACTIONS OF MANY OTHER PEPTIDE GROWTH FACTORS AND DETERMINES A SUBJULY ON NEGATIVE DIRECTION OF THEIR EFFECTS. SUBJULY: HOMODIMER, DISCULPIDE-LINKED. SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo sapiens (Human).

MANY CELLS SYNTHESIZE TGF-BETA AND ESSENTIALLY ALL OF THEM HAVE SPECIFIC RECEPTORS FOR THIS PEPTIDE. TGF-BETA REGULATES THE ACTIONS OF MANY OTHER PEPTIDE GROWTH FACTORS AND DETERMINES A POSITIVE OR NEGATIVE DIRECTION OF THEIR EFFECTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE-87102890; PubMed=2879635; Cheifetz S., Weatherbee J.A., Tsang M.L.S., Anderson J.K., Mole J.E., Lucas R., Massague J.;

Growth factor expression in skin during wool follicle development.";

Comp. Biochem. Physiol. 1108:697-705(1995).

-I-FUNCTION: TGF-BETA IS A MULTIFUNCTIONAL PEPTIDE THAT CONTROL

PROLIFERRATION, DIFFERRATIANION, AND OTHER FUNCTIONS IN MANY CELL

TYPES. MANY CELLS SYNTHESIZE TGF-BETA AND ESSENTIALLY ALL OF THEM
HANC SPECIFIC RECEPTORS FOR THIS PEPTIDE. TGF-BETA REGULATES THE

ACTIONS OF MANY OTHER PEPTIDE GROWTH FACTORS AND DEFERMINES

A POSITIVE OR NEGATIVE DIRECTION OF THEIR EFFECTS.

DNA Seq. 7:375-378(1997).
-!- FUNCTION: TGF-BETA IS A MULTIFUNCTIONAL PEPTIDE THAT CONTROL
-- PROLIFERRATION, DIPPERENTATION, AND OTHER FUNCTIONS IN MANY CELL
TYPES. MANY CELLS SYNTHESIZE TGF-BETA AND ESSENTIALLY ALL OF THEM
HAVE SPECIFIC RECEPTORS FOR THIS PEPTIDE. TGF-BETA REGULATES THE
ACTIONS OF MANY OTHER PEPTIDE GROWTH FACTORS AND DETERMINES
A POSITIVE OR NEGATIVE DIRECTION OF THEIR EFFECTS.
                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                         mitted (JUL-1199) to the EMBL/GenBank/DDBJ databases.
FUNCTION: MULTIFUNCTIONAL PEPTIDE THAT CONTROLS PROLIFERATION,
DIFFERENTIATION, AND OTHER FUNCTIONS IN MANY CELL TYPES. MANY
CELLS SYNTHESIZE TGF-BETA 1 AND ESSENTIALLY ALL OF THEM HAVE
SPECIFIC RECEPTORS FOR THIS PEPTIDE. TGF-BETA 1 REGULATES THE
ACTIONS OF MANY OTHER PEPTIDE GROWTH FACTORS AND DETERMINES A
POSITIVE OR NEGATIVE DIRECTION OF THEIR EFFECTS.
SUBUNIT: HOMODIMER, DISULFEDE-LINKED (BY SIMILARITY).

TRANSFORMING GROWTH FACTOR BETA 1 PRECURSOR (TGF-BETA 1) (TGF-BETA 5).
                                                                                                                                                                                                                                     Kondaiah P., Sands M.J., Smith J.M., Fields A., Roberts A.B., Sporn M.B., Melton D.A.; "Identification of a novel transforming growth factor-beta (TGF-beta
                                                                                                                                                                                                                                                                                                                                             Vempati U.D., Kondaiah P.;
Submitted (AUG-1997) to the EMBL/GenBank/DDBJ databases.
--- FUNCTION: IMPORTANT ROLE IN CERTAIN ASPECTS OF DIFFERENTIATION.
--- SUBUNIT: HOWODIMER, DISULFIDE-LINKED.
--- SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                  Xenopus laevis (African clawed frog).

"Genes coding for mouse activin beta C and beta E are closely linked and exhibit a liver-specific expression pattern in adult tissues.";
Biochem. Biophys. Res. Commun. 231:655-661(1997).
-!- FUNCTION: INHIBINS ARE GONADAL GIXCOPEPTIDES THAT INHIBIT THE SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND. ON THE OTHER HAND ACTIVINS ACTIVINS ACTIVINS REGULATE GROWTH AND DIFFERENTIATION OF FOLLITROPIN. ACTIVINS REGULATE EXPLANDAL CARCINOMA CELLS, INDUCE EXTHROPOIESIS, STIMULATE INSULIN SECRETION, AND PROMOTE NEURAL CELL SURVIVAL. ACTIVINS ARE ALSO IMPORTANT IN EMBRYONIC AXIAL
                                                                                                         Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

-1- FUNCTION: INHIBIN IS A GONADAL GLYCOPEPTIDE THAT INHIBITS THE SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND. ON THE OTHER HAND ACTIVIN ACTIVINA CTIVINA STATE SECRETION OF FOLLITROPIN. ACTIVIN IS ALSO IMPORPART IN EMBRYONIC AXIAL DEVELOPMENT.

-1- SUBUNIT: DIMERIC, LINKED BY ONE OR MORE DISULFIDE BONDS.

INHIBIN A IS A DIMER OF ALPHA AND BETA-B.

ACTIVIN A IS A DIMER OF BETA-A.

ACTIVIN AB IS A DIMER OF BETA-A.

ACTIVIN AB IS A DIMER OF BETA-A.

-1- SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               321 CCKKQFFVSFK-DIGWNDWIIAPSGYHANYCEGECPSHIAGTSGSSLSFHSTVINQYRLR 379

-!- TISSUE SPECIFICITY: EXPRESSED SPECIFICALLY IN DEVELOPING AND ADULT SKELETAL MUSCLE. WEAK EXPRESSION IN ADIPOSE TISSUE.
-!- DEVELOPMENTAL STAGE: FIRST DETECTED AT DAY 9.5 POST-COITUM IN ONE-THIRD OF DEVELOPING SOMITES. AT DAY 10.5, EXPRESSED IN THE MYOTOME COMPARTMENT OF SOMITES. AT LATER STAGES OF DEVELOPMENT, DETECTED IN A WIDE RANGE OF DEVELOPING MUSCLES. EXPRESSION CONTINUES IN ADULTHOOD.

-1- FUNCTION: SERVES TO FACILITATE THE DIFFERENTIATION OF EITHER MESODERN OR BY PROVIDING PREMISSIVE ENVIRONMENT.

-1- SUBUNIT: HOMODIMER (PROBABLE).

-1- TISSUE SPECIFICITY: ABUNDANT IN OVARIES AND EGGS, AND EQUALLY DISTREBUTED AMONG ALL BLASTOMERES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 355;

"Regulation of anterior/posterior patterning of the axial skeleton by growth/ddifferentiation factor 11.";

Nat. Genet. 22:260-264(1999).

-I. FUNCTION: SECRETED SIGNAL THAT ACTS GLOBALLY TO SPECIFY POSITION IDENTITY ALONG THE ANTERIOR/POSTERIOR AXIS DURING DEVELOPMENT.

PLAY CRITICAL ROLES IN PATTERNING BOTH MESODERMAL AND NEURAL TISSUES AND IN ESTABLISHING THE SKELETAL PATTERN.

-I. SUBGUIT: HOMODIMER, DISGUEDE-LINKED (BY SIMILARITY).

-I. SUBGELLULAR LOCATION: SECRETED (PROBABLE).

-I. SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GDF8 OR MSTN OR MH.

LOW LEVELS ARE FOUND UP TO DAY 29 EMBRYOS. LEVELS INCREASE FROM
DAY 31 UP UNTIL LATE GESTATION.
DISEASE: DEFECTS IN GDF8 ARE THE CAUSE OF THE DOUBLE-MUSCLE
PHENOTYPE OR MUSCULAR HYPERTROPHY (MH), AN AUTOSOMAL RECESSIVE
DISEASE FREQUENTLY FOUND IN THE BELGIAN BLUE AND PIEDMONTESE
CATTLE BREEDS. THIS DISEASE IS CHARACTERIZED BY AN INCREASED
MUNDER OF MUSCLE FIBERS (HYPERPLASIA), RESULTING IN AN INCREASE IN
SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                                                                                                                                                                                                                           SUBUNIT: HOMODIMER, DISULFIDE-LINKED (BY SIMILARITY).
TISSUE SPECIFICITY: SPECIFICALLY EXPRESSED IN DEVELOPING AND ADULT
SKELETAL MUSCLE. HIGHEST LEVELS FOUND IN THE HINDLIME MUSCLES
M.SEMIMEMBRANOSUS AND M.BICEPS FEMORIS; LOW LEVELS IN OTHER
                                                                                                                                                                                                                                                      "Double muscling in cattle due to mutations in the myostatin gene.";
Proc. Natl. Acad. Sci. U.S.A. 94:12457-12461(1997).

C -!- FUNCTION: INHIBIN IS A GONADAL GLYCOPEPTIDE THAT INHIBITS THE SECRETION OF FOLLITROPIN. ACTIVIN IS ALSO
ACTIVIN ACTIVIN ACTIVIN SATIVED BY ONE DIGULETIDE BONDS.
INHIBIN A IS A DIMER OF ALPHA AND BETA-B.
C --- SUBUNITY: DIMERSIC, LINEAD BY ONE DIGULETIDE BONDS.
INHIBIN A IS A DIMER OF BETA-A.
C ACTIVIN A IS A DIMER OF BETA-A.
C --- SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.

-! FUNCTION: INHIBIN IS A GONADAL GLYCOPEPTIDE THAT INHIBITS THE
SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND. ON THE OTHER HAND
ACTIVIN ACTIVATES THE SECRETION OF FOLLITROPIN. ACTIVIN IS ALSO
IMPORTANT IN EMBRYONIC AXIAL DEVELOPMENT.
-: SUBBRYONIC AXIAL DEVELOPMENT.
-: SUBBRYONIC AXIAL DEVELOPMENT.

Submitted (MAY-1993) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: INHIBIN IS A GONDAL GIVCOBETIDE THAT INHIBITS THE
SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND. ON THE OTHER HAND
ACTIVIN ACTIVATES THE SECRETION OF FOLLITROPIN. ACTIVIN IS ALSO
IMPORTANT IN EMBRYONIC AXIAL DEVELOPMENT.
-!- SUBGNIT: DIMBRIC, LINKED BY ONE OR MORE DISULFIDE BONDS.
INHIBIN A IS A DIMER OF ALPHA AND BETA-A.
ACTIVIN A IS A DIMER OF BETA-A.
ACTIVIN A IS A DIMER OF ESTA-A.
-- ACTIVIN A BIS A DIMER OF BETA-A.
-- SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                            Murata M., Eto Y., Shibai H., Sakai M., Muramatsu M.;
"Erythroid differentiation factor is encoded by the same mRNA as that of the inhibin beta A chain.";
Proc. Natl. Acad. Sci. U.S. 85:2434-2438(1988).
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Stewart A.G., Milborrow H.M., Ring J.M., Crowther C.E., Forage R.G., "Human inhibin genes. Genomic characterisation and sequencing."; FEBS Lett. 206:329-334(1986).

FUNCTION: INHIBITS IS A GONADAL GLYCOPEPTIDE THAT INHIBITS THE SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND. ON THE OTHER HAND ACTIVIN ACTIVATES THE SECRETION OF FOLLITROPIN. ACTIVIN IS ALSO IMPORTANT IN EMBRY CAIL AND DEVELOPMENT.
-1. SUBUNT: DIMERIC, LINED BY ONE OR MORE DISULFIDE BONDS.
INHIBIN A IS A DIMER OF ALPHA AND BETA-B.
ACTIVIN A IS A DIMER OF BETA-A.
ACTIVIN AB IS A DIMER OF BETA-A.
-1. SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                                                                                                                                                                             SEQUENCE OF 311-381 FROM N.A.

-i- FUNCTION: SERVES TO FACILITATE THE DIFFERENTIATION OF EITHER MESODERM OR ENDODERM EITHER AS A COFACTOR IN AN INSTRUCTIVE SIGNAL OR BY PROVIDING PERMISSIVE ENVIRONMENT.

-i- SUBUNIT: HOWODIMER (PROBABLE).

-i- TISSUE SPECIFICITY: VEGETAL REGION OF THE EGG.

-i- DEVELOPMENTAL STAGE: ABUNDANT IN OCCYTES AND PRESENT THROUGHOUT CLEAVAGE AND GASTROLA STAGE. NOT READLIY DETECTED AT A STAGE WHEN SOMITOGENESIS IS NEARLY COMPLETE IN 24 HR EMBRYOS. STEADY STATE LEVEL DECREASES IN A CONTINUOUS FASHION WITH DEVELOPMENTAL AGE.

-i- SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-OCT-2000 (Rel. 40, Last annotation update)

SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND. ON THE OTHER HAND ACTIVIN ACTIVATES THE SECRETION OF FOLLITROPIN. ACTIVIN IS ALSO IMPORTANT IN EMBRYONIC AXIAL DEVELOPMENT.
SUBBUNIT: DIMERIC, LINKED BY ONE OR MORE DISULFIDE BONDS.
INHIBIN A IS A DIMER OF ALPHA AND BETA-A.
INHIBIN B IS A DIMER OF BETA-A.
ACTIVIN A IS A DIMER OF BETA-A.
SIMILARITY: BELONGS TO THE TGF-BETA FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                InterPro; IPR001833; -.
